

EZ Pay™ Ticket System Updates

Maximize the effectiveness of ticket-assisted promotions and payouts with six exciting new features for the *EZ Pay* Ticket System.

Attract new players and reward valued customers with *EZ Pay* Promotional Tickets. These controllable promotional offers, which can be mailed out to customers or delivered on the spot for that personal touch, are designed for game play only at *EZ Play* gaming machines. Players may cashout any winning credits.

Provide your customers with a fast, easy way to place credits on their favorite *EZ Play* machine with the *EZ Pay* Ticket System's Purchase Tickets feature. This new *EZ Pay* function allows your customers to purchase tickets at a cashier's workstation which are redeemable at *EZ Play* machines or other cashier stations.

Give players a new level of security and convenience with the *EZ Pay* Ticket System's newest feature – full support for *QuikPlay* ATM. By simply swiping their debit cards at their favorite *EZ Play* gaming machine, players transfer approved funds through the *EZ Pay* Ticket System as playable credits or a cashout ticket.

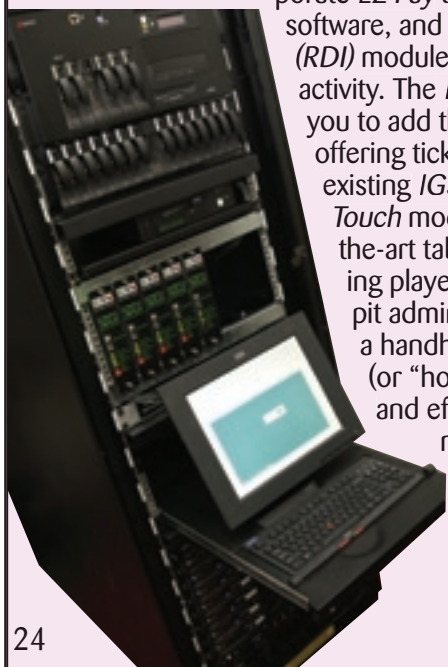

Expand the customer convenience of your *EZ Pay* Ticket System with Wireless Validation Terminals running on next generation handheld devices. Properly equipped floor attendants can validate tickets with the device's handheld scanner, print receipts from belt-mounted receipt printers, and pay customers right on the floor from any corner of your casino.

Provide your players with an easy and convenient way to redeem cashout tickets issued by *EZ Play* gaming machines right on the casino floor. Valid tickets redeemed through an *EZ Pay* Ticket System Redemption Station interface are paid on-the-spot by an automated ticket redemption device's high-security, electronically controlled coin and currency hoppers.

Accurately reflect the inclusion of *EZ Pay* ticket data on *IGS* accounting reports with the interface of the *IGS* and *EZ Pay* Ticket System applications. Familiar *IGS* menu options transfer *EZ Pay* ticket summary data to the *IGS* software meters' database for each *EZ Play* gaming machine on your *IGS* floor.

Coming Next for the IGS™ Product

The *IGS* product is expanding its capabilities with the advent of three new software enhancements. Currently in progress are the interfaces to incorporate *EZ Pay* and *Table Touch* functionality into the *IGS* software, and development of the *Real-Time Data Interface (RDI)* module, which offers a real-time view of player activity. The *EZ Pay* interface to the *IGS* software allows you to add the highly successful *EZ Pay* Ticket System, offering ticket-in, ticket-out (TITO) technology, to your existing *IGS* software. The integration of the *Table Touch* module with *IGS* software provides a state-of-the-art table management system for instantly tracking player table activity, and performing an array of pit administrative functions. The *RDI* solution uses a handheld component that identifies high-action (or "hot") players on the floor, and lets you quickly and efficiently attend to your players' needs. It also monitors machine events, allowing you to follow up rapidly with any machine-related issues. Look for these new developments soon from your *IGT Gaming Systems* team!

The Table Touch™ Software Revolution!

Take your table gaming to the next level with the *Table Touch* solution. This revolutionary new product from *IGT Gaming Systems* transforms the art of rating and comping players from a time-consuming, meticulous pencil-and-paper endeavor to one of automated simplicity and ease – all with the touch of a button!

This amazing new table games management system enables you to conduct several day-to-day pit operations, store security photos, set floor and game event alerts, produce reports, issue comp requests, access important floor and player information, and more! Plus, its customizable "game rules" feature allows you to publish in-house gaming policies as well as a variety of game payout calculators.

Its vivid, graphical display comes complete with color-coded alerts to keep you informed of what's happening on your casino floor in real time. In addition, its versatile "host mode" lets you cater to both hosted VIPs as well as other high rollers.

Together with its radio frequency (RF) capability, enhanced security options, and innovative "open architecture" design which interfaces to most casino host systems including the *IGS* product, the *Table Touch* system gives your team the freedom and security it needs to get things done.

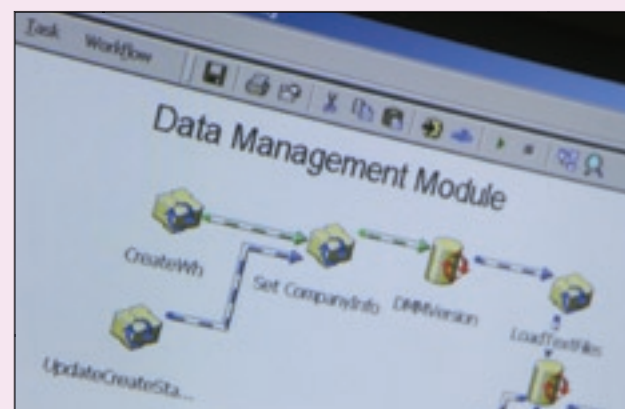

So revolutionize your table games operation with the *Table Touch* solution! Contact your *IGT Gaming Systems* Account Executive today to schedule your on-site demonstration of the *Table Touch* system!

Data Jolt

Electrify your data with the Data Management Module (*DMM*) solution from *IGT Gaming Systems*!

This exciting new report-writing tool gives you access and creative license to stored *IGS* data, letting you generate dynamic and customized

informational displays such as pivot tables, charts, data tables, or reports. The *DMM* product, powered by *Brio Intelligence*™ software, gives you a virtually limitless analysis and reporting environment with unparalleled convenience and flexibility.

Featuring a user-friendly "drag and drop" interface, *DMM* software gives you full control over your data, allowing you to create customized tables from source tables. The *DMM* product also lets you create and save query templates, known as "query documents," which in turn can be associated with either different databases or repeatedly to the same database when data is
