

Offer Players the Excitement of Progressive Gaming

IGT continues to advance gaming machine technology with a new Local Progressive Controller – called the LPC – specifically developed to work with IGT gaming machines. This device enables you to establish and manage a progressive environment without the need to contract with third-party suppliers. The technology also enables us to provide a more comprehensive and attractive product package, bundling the LPC with our machines and games.

A single LPC can control up to 63 machines – nearly twice as many as most traditional progressive controllers. Updates to all machines in the progressive link are performed simultaneously. The LPC offers the opportunity to create progressives for more than one denomination on a single gaming machine.

With the LPC, machines are connected using fiber-optic links with simple connections. Special pigtailed and harnesses are not required.

The first games to be compatible with the LPC are the progressable games in the *Game King 5.0 Multi-Game* suite, including video poker and keno. Multi-hand poker games such as *Triple Play Draw Poker* and other popular favorites like the *Fifty Play Draw Poker* and *Hundred Play Draw Poker* games will also support progressives.

The LPC can manage progressive jackpots for several different denominations in a single gaming machine. It does this by segmenting slot machine play information into eight groups, with eight progressive levels per group. The technology affords you a perfect way to improve your earnings potential with bar-top games, for instance.

Consider the following example. Let's say you have 3 progressive video poker banks of 8 games in each for a total of 24 machines. The banks have progressive jackpots in denominations of 25¢, 50¢ and \$1.00, respectively. The LPC

controls the jackpots as 3 separate groups. If you choose to add a progressive jackpot in a new denomination, the LPC would simply see the additional denomination on that bank as another group, and would therefore manage four progressive groups on three banks of machines.

Modifying and updating game configurations is simpler than ever with the LPC because new data can be downloaded from a laptop to the device. This in turn automatically updates every machine linked to the LPC, saving time and effort, and reducing the length of time games are out of service.

Stop by the IGT or Action Gaming booth to see the LPC in action, and learn how this versatile, state-of-the-art Local Progressive Controller can simplify progressive gaming management in your casino.
